The County of San Luis Obispo and PG&E are engaged in a public-private partnership to implement design-build energy efficiency projects at County facilities – the Sustainable Solutions Turnkey (SST) project. Our goal is to decrease the County’s costs, energy use and greenhouse gas (GHG) emissions.

**PROJECT OVERVIEW**

8 ENERGY EFFICIENCY PROJECTS

A total of 8 projects at over 20 facilities are currently being implemented including lighting, heating and cooling, and energy management and control upgrades. Over 60% of the project costs are funded by utility incentives and non-county funds.

**PROJECT RESULTS**

$334,000 ANNUAL SAVINGS

686 CO₂ METRIC TONS ANNUALLY

31,545 TREES PER YEAR

The energy efficiency projects are projected to generate over $330,000 annually in energy and operational cost savings.

The projects will decrease the County’s energy usage by 1.6 MWh and reduce its Carbon Footprint by 686 metric tons annually – equivalent to removing 151 passenger vehicles from the road or planting 31,545 trees per year!
